Profile

Senior Software Engineer with over nine years of commercial experience designing and delivering SaaS and financial-services software using PHP/Laravel, REST APIs, SQL and Vue/TypeScript. Experienced in clarifying business requirements, designing technical solutions, and ensuring successful implementation and deployment. Background includes complex financial rules, reliable data migrations, API integrations and full-stack delivery across greenfield products and established platforms.

Technical Skills

- **Backend & APIs:** PHP 8+, Laravel, REST API design and development, third-party integrations
- **Frontend:** Vue.js, TypeScript, JavaScript, HTML5, CSS3
- **Databases:** MySQL, PostgreSQL, SQL Server, relational data modelling and migrations
- **Architecture & Design:** System design, object-oriented design, layered/Clean Architecture principles, domain modelling, dependency inversion, service-oriented systems, API and integration design
- **Testing & Quality:** PHPUnit, unit, feature, integration and regression testing, code reviews
- **DevOps & Tooling:** Docker, Git, CI/CD, AWS, Jira, PhpStorm
- **AI-Assisted & Agentic Engineering:** Codex, Claude, task specification and delegation, AI-assisted implementation, code review, testing and validation

Employment History

Senior Software Developer, Propel Finance, Remote

(Jan 2025 - Present)

- Deliver features across a multi-application financial-services platform, from clarifying requirements and designing solutions through implementation, testing and production deployment.
- Implement and maintain functionality across Laravel/Vue applications, core backend services, REST APIs and third-party integrations, including code reviews and production support.
- Designed and implemented enhancements to an existing credit-line headroom calculator using Experian score levels (1–9) and distinct hire-purchase and leasing rules. Separated rule applicability from calculation logic and verified behaviour with boundary and regression tests.
- Designed and implemented a repeatable migration of historical financial rules from legacy JSON structures into normalised relational tables, handling variations across environments and incorporating idempotency, dry-run and targeted execution options, logging and automated tests.
- Implemented core-service API endpoints, Laravel service integrations and Vue/TypeScript functionality for a greenfield Customer Portal, using consistent API contracts for communication between applications.

Senior Software Developer, PlanHappy Lifestyle Financial Planning Academy, Remote

(Jan 2022 - Dec 2024)

- Built and delivered backend and frontend functionality for a financial-planning and pensions SaaS platform from early development through public launch, including Product Switch Analysis dashboards, multi-year future value projections and net-yield calculations.
- Translated product requirements into technical designs and delivered features through implementation, testing and deployment.
- Presented product demonstrations to senior stakeholders, using their feedback to help shape development priorities; reviewed code changes to maintain engineering quality.

Earlier Experience

Full Stack Software Engineer, Komodo Digital, Newcastle upon Tyne
(Mar 2020 - Dec 2021)

- Delivered full-stack functionality for a SaaS surveillance platform, including Stripe payment flows, subscriptions, credit renewals and account/team management.
- Designed and implemented features and third-party integrations for an estate-agency CRM, covering subscriptions, payments, identity/compliance verification and conveyancing workflows.

Full Stack Software Developer, Blue Cookie, Newcastle upon Tyne
(May 2017 - Mar 2020)

- Implemented Laravel/MySQL application features and REST APIs supporting companion mobile applications, alongside Vue user interfaces.
- Translated requirements into technical solutions, delivered application features and provided technical guidance to junior developers.

Business Intelligence Consultant, Orchard Information Systems, Newcastle upon Tyne
(Nov 2014 - May 2017)

- Delivered reporting and data-integration solutions using SQL Server, SSIS and Microsoft BI tools, while maintaining the data warehouse.
- Designed SQL schemas and data models and implemented ETL processes to improve reporting data quality.

Data Analyst, Convergys, Newcastle upon Tyne
(Jan 2012 - Nov 2014)

- Delivered management-information reports and ad hoc analysis to support operational decision-making.

Education

Open University, United Kingdom
BSc (Honours) Computing and IT - Computer Science pathway (final module in progress)
